Computerized “Stealth System” for Brain Surgery. Imagine virtual brain surgery-using a computer to plan the surgical approach and tell the surgeon where to operate.

Computerized “Stealth System” for Brain Surgery ...
The member has had a needle electromyographic (EMG) study to evaluate the condition either concurrently or within the past year. The requirement for needle EMG with NCV may be waived for persons on anti-coagulant therapy with warfarin (Coumadin), direct thrombin inhibitors (e.g., dabigatran (Pradaxa), desirudin (Iprivask)), or heparins that can not be interrupted.

Nerve Conduction Studies - Medical Clinical Policy ...
Electromyographers occasionally are called on to evaluate the proximal nerves in the shoulder and arm. Isolated lesions of these nerves, including the suprascapular, axillary, musculocutaneous, long thoracic, and spinal accessory, are far less frequent than the common entrapment and compressive neuropathies of the median, ulnar, and radial nerves.

Proximal Neuropathies of the Shoulder and Arm ...
There have been several larger studies which utilized body weight, gender, and/or body mass index (BMI) together with ultrasound evaluation of deltoid fat pad and skin fold thickness to determine the appropriate needle length for intramuscular injection in different patient groups. In one of the few studies addressing the risk of injecting into shoulder tissues underlying the deltoid...
