Magnetic resonance neurography (MRN) is the direct imaging of nerves in the body by optimizing selectivity for unique MRI water properties of nerves. It is a modification of magnetic resonance imaging. This technique yields a detailed image of a nerve from the resonance signal that arises from in the nerve itself rather than from surrounding tissues or from fat in the nerve lining.

Magnetic resonance neurography - Wikipedia
During a sympathetic nerve block, a numbing medicine is injected into the area around the sympathetic nerves in the lower back or neck to reduce or eliminate pain by “turning off” the nerve impulses.
